Foreword

The Colorado Seed Growers Association (CSGA) is a non-profit educational and service organization, authorized by Cooperative Extension of Colorado State University as the official seed certifying agency in Colorado. Growers listed in this directory are members of the CSGA, producing certified seed in accordance with the rules and regulations of the Association. CSGA is a member of the Association of Official Seed Certifying Agencies (AOSCA). AOSCA is an organization composed of agencies responsible for seed certification in the United States, Canada, Argentina, Australia, Chile, New Zealand, Panama and South Africa. The following listings include fields eligible for certification in 2016. Each seed producer is responsible for maintaining the integrity of the certifiable seed listed herein. Final certification and the right to represent the seed as certified is dependent upon the results of field inspection, proper seed conditioning and laboratory analysis.

Growers warrant that seed sold by them conforms to the standards of the CSGA and to applicable state and federal seed laws. Certified seed may be sold bagged or in bulk. Bagged seed must be packaged in new containers and have an official certified tag or label attached to each bag. Each sale of certified seed in bulk must be accompanied by a bulk sales certificate completed and signed by the producer.

Colorado Seed Law requires that each container be labeled as to its origin, the germination percentage and date tested, percent by weight pure seed, other crop seed, weed seed and inert matter. In addition, the label must contain a lot number or lot identification, along with the name and address of the person who labeled or sold the seed.

The CSGA assumes no financial responsibility for seed listed in this directory or for disagreements over sales which may arise from this list. However, any complaints or irregularities should be reported to the CSGA office.

Russian Wheat Aphid Resistant Wheats

Ankor, Bill Brown, Bond CL, Halt, Hatcher, Prairie Red, Prowers 99, Ripper, Thunder CL and Yumar are varieties released by Colorado State University that are resistant to the original Russian Wheat Aphid (RWA) Biotype RWA1. These varieties are all susceptible to Biotype RWA2 and other biotypes identified since 2003 because they carry one or more genes, that confer resistance only to Biotype RWA1. Biotype RWA2 was identified during the 2003 growing season, and several others have been identified since that time. Ongoing biotype surveys, initiated in in 2005, indicate that Biotype RWA2 has largely replaced the original. This means that RWA resistance currently is not an important criterion for Colorado wheat growers to use in selecting their wheat varieties. Because of the biotype situation, wheat producers will need to manage Russian Wheat Aphid infestations the same way they did before resistant varieties became available.

The new RWA strain should be treated with a registered insecticide if aphid counts exceed economically acceptable levels. See the following web sites for reviews of RWA control recommendations:

www.ext.colostate.edu/pubs/insect/05568.html
http://wiki.bugwood.org/HPIPМ:Russian_Wheat_Aphid

Wheat germplasm with resistance to Biotype RWA2 already has been identified and is being transferred to adapted varieties.

Foundation Seed

Foundation seed of public varieties is produced by Agronomy Foundation Seed, Department of Soil and Crop Sciences, Colorado State University.

Foundation seed of the following varieties is available for planting in the Fall of 2016. Foundation Seed orders will be accepted until August 22, 2016, after which the seed will be allocated. Individual requests can be routed to the Colorado Seed Growers office at 970-491-6202 or Aaron Brown at 970-222-4335. You may also email Aaron at aaron.brown@colostate.edu.

All seed can be picked up at the Ag Research Development and Education Center (ARDEC) on the east frontage road along I-25 north of Fort Collins; shipping can be handled with prior arrangements. Any seed ordered but not paid for or picked up by September 19, 2016 will be released to other growers.

Foundation seed will be packaged in 2,000 lb totes except in cases of carryover seed - if available!

Seed Arbitration

The Colorado Seed Law passed in 1993 provides for the arbitration of disputes between seed buyer and seller. The law states that all seed sold shall be tagged with a notice of the required arbitration.

If the seed buyer believes that the seed did not perform as warranted, a claim may be filed with the Colorado Commissioner of Agriculture. The law provides for a board who will hear testimony, review evidence and decide the validity of the claim. Findings of the board are not binding but may be used as evidence in any civil suit.

Further information on arbitration or assistance in filing for arbitration should be directed to the Colorado Department of Agriculture at 303-249-4140.

NOTICE: Listings are based on acres applied for. Eligibility for certification will depend on satisfactory field and seed inspections.

Seed Classes

Seed certification relies on a generation sequence of seed increase from the original Breeder seed through two or three subsequent generations. The number of generations beyond Breeder seed is determined by the originator at the time a variety is formally released. These generations are often identified as classes, and each class is produced and handled to maintain genetic purity. The primary advantage is that seed sold to a farmer is never more than a limited number of multiplications from that produced under the breeder's control. The limited generation system, when coupled with strict production and seed standards, assures genetically pure high-quality seed.

Breeder - Breeder seed shall be that seed or vegetative propagating material directly controlled by the originating or sponsoring plant breeder, institution, or firm which provides the source for the initial and recurring increase of Foundation seed. (B)

Foundation - Foundation seed is produced from Breeder seed and maintained by state agricultural experiment stations or private companies. Foundation seed is the source of Registered and/or Certified seed. (F)

Registered - Registered seed is the progeny of Foundation seed. Registered seed, when a Registered class is designated, is the parent stock for the production of Certified seed. (R)

Certified - Certified seed is the progeny of Foundation or Registered seed. Certified seed is the planting stock recommended for commercial production. (C)

Plant Variety Protection Act and Federal Seed Law, Title V

The Plant Variety Protection ACT (PVPA) was signed into law on December 24, 1970. The PVPA's objective is to encourage the development of novel varieties of sexually-reproduced plants and make them available to the public, providing protection to those who breed, develop, or discover them, and thereby promoting agricultural progress in the public interest. The U.S. Dept. of Agriculture is responsible for administering the Act.

A Certificate of Protection is valid 20 years from date of issuance in most cases. The owner has the right to exclude others from selling, offering for sale, reproducing, importing, or exporting the variety during this time. The owner is responsible for enforcing these rights.

Two options for plant variety protection are available to the developer of the variety. The first option enables the developer to sell or authorize for sale either certified or uncertified seed of the variety. The second option is the "certification only" option which utilizes provisions of Title V of the Federal Seed Act. A variety protected in this manner may be sold by variety name only as a class of certified seed. Sale of non-certified seed by variety name is in violation of both the certificate owner's rights and federal and state seed laws. Seed may be called "Certified" only after meeting all requirements and standards of a member of the Association of Official Seed Certifying Agencies (AOSCA). Violators of Title V may be prosecuted by the federal or state government. Most newly released varieties are protected under the "certification only" option. Contact CSGA with questions regarding PVP status of varieties.

Utility Patents

Utility patents are another means of protection for developers of new plant varieties. The CLEARFIELD wheat technologies are protected under U.S. Patent law and can be used by farmers only if they sign a BASF CLEARFIELD Stewardship Agreement for the year in which they will grow CLEARFIELD wheat. The agreement requires that the farmer, among other things, use CLEARFIELD wheat solely for planting a single commercial crop.

Questions and Answers on Plant Variety Protection

Q: What are the benefits of PVP for farmers?

A: The Plant Variety Protection Act was designed to promote the development of new plant varieties. It allows the breeder to recoup some of the development costs, often through royalties, to reinvest in future variety development programs.

Q: What does PVPA Title V protection mean?

A: The variety can only be SOLD as a class of certified seed. Sales of non-certified seed of these varieties is illegal.

Q: Can a farmer save seed of a protected variety?

A: For varieties protected under 1994 PVPA, yes. A farmer can save seed to plant on his own holdings (land owned, leased, or rented). For varieties protected by CLEARFIELD Utility Patent, no. New certified seed must be purchased each year.

Q: Can a farmer sell seed of a protected variety?

A: For varieties protected under 1994 PVPA or Utility Patent, no, unless permission is given by the variety owner. Contact CSGA if you do not know what protection a variety is covered by.

Q: In an effort to get around the law, can a farmer advertise farmer-saved seed of a protected variety as “Variety Not Stated” (VNS)?

A: No, selling a protected variety as VNS is a violation of the law.

Q: Can I condition/clean seed for a farmer?

A: Yes, but any actions taken as a step in marketing farmer-saved seed infringe upon the rights of the variety owner. Under the 1994 PVPA, cleaning or storing farmer-saved seed for sale are infringements. Anyone who cleans or conditions farmer-saved seed should keep written documentation from the farmer stating that the seed being cleaned is not in violation of PVP laws or patents.

HARD RED WINTER WHEAT

AP503 CL2 HARD RED WINTER WHEAT -

AP503 CL2 is a hard red winter wheat developed by Syngenta and released in 2008. This variety has two genes for tolerance to the Beyond® family of herbicides, which will allow for the addition of adjuvants to enhance weed control of tough grasses such as feral rye using the CLEARFIELD® system. AP503 CL2 is most similar to Jagalene, which is one of the parents in the cross. It has medium maturity, very good test weight, and good straw strength. AP503 CL2 has intermediate resistance to stripe rust, and is susceptible to leaf rust. **Grain production of AP503 CL2 may not be saved for replanting under any circumstances.** Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

EVERY HARD RED WINTER WHEAT -

Avery hard red winter wheat was released by Colorado State University (CSU) in 2015. Avery was named for Franklin C. Avery who was an early 20th century agricultural and banking pioneer in northern Colorado. Avery is an awned, white-chaffed, medium maturing wheat with medium height, a medium-long coleoptile, fair straw strength, and average test weight. Avery is derived from the cross TAM 112/Byrd. Avery is very similar to Byrd in having good winterhardiness, excellent drought stress tolerance, and very high yield potential. Avery differs from Byrd in having slightly larger kernels, two days later heading date, and slightly improved baking quality characteristics. Avery is moderately susceptible to susceptible to prevalent races of stripe rust (2012 races), susceptible to leaf rust and stem rust, moderately susceptible to wheat streak mosaic virus, susceptible to all biotypes of the Russian wheat aphid, and resistant to Greenbug biotype E, the wheat curl mite, and wheat soil borne mosaic virus. Avery is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Variety Protection Applied For – 1994 PVPA.

**BRAWL CL PLUS HARD RED WINTER
WHEAT -**

Brawl CL Plus was released by Colorado State University in 2011. It is an awned, white-chaffed, medium height and early maturing wheat with both excellent straw strength and test weight. Brawl CL Plus is moderately resistant to stripe rust and moderately susceptible to leaf rust. Brawl CL Plus is a two-gene Clearfield wheat and is tolerant to the herbicide Beyond™ which has shown excellent selective control of jointed goatgrass, cheatgrass, downy brome, and feral rye with fall or spring herbicide application. The pedigree of Brawl CL Plus is Teal 11A/Above/CO99314 (CO99314 = TX91V4931/Halt). Brawl CL Plus has shown yields similar to Above and Bond CL (other Clearfield wheat varieties), with excellent test weight, stripe rust resistance, and milling and baking quality. **Grain production of Brawl CL Plus may not be saved for replanting under any circumstances.** Brawl CL Plus is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

BYRD HARD RED WINTER WHEAT -

Byrd was released by Colorado State University (CSU) in 2011 and was named for CSU's first wheat breeder, Byrd Curtis. It is an awned, white-chaffed, medium-maturing wheat that is medium in height and has excellent test weight and average straw strength. Byrd is moderately resistant to stripe rust and moderately susceptible to leaf rust. The pedigree of Byrd is TAM 112/CO970547-7 (CO970547-7 = Ike/Halt). Byrd shows high dryland and irrigated yields, excellent drought stress tolerance, and exceptional milling and baking quality. Byrd is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

DENALI HARD RED WINTER WHEAT -

Denali was released to seed producers cooperatively by Colorado State University and Kansas State University in August 2011. It is awned, white-chaffed with medium-tall height and medium-late maturity. Denali was released based on its superior grain yield under non-irrigated and irrigated production conditions across the High Plains region, its excellent test weight, and its resistance to stripe rust. Reaction of Denali to new stripe rust races appearing in 2012 is moderately susceptible. Denali possesses good straw strength; milling quality is good and baking quality is average. Denali was selected from the cross CO980829/TAM 111. Denali is marketed by the Colorado Wheat Research Foundation under the PlainsGold Brand™ and the Kansas Wheat Alliance (KWA). Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety- 1994 PVPA.

HATCHER HARD RED WINTER WHEAT - Hatcher was released by Colorado State University in 2004. Hatcher is marketed by the Colorado Wheat Research Foundation. Hatcher has established a very stable, high-yielding record in Colorado. Hatcher was developed via a three-way cross with Yumar (50% parentage), Vista (25% parentage), and an experimental hard white winter wheat from Kansas State University (25% parentage). Hatcher is an awned, white-chaffed, medium maturing, semidwarf. Hatcher has intermediate coleoptile length, good shattering tolerance, average straw strength and excellent test weight. Hatcher is moderately susceptible to leaf rust and moderately resistant to stripe rust. Milling characteristics of Hatcher are excellent while its baking characteristics are good. Hatcher is resistant to Russian Wheat Aphid biotype 1*. Hatcher is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA. * Biotype 2 has largely replaced biotype 1. Wheat producers should manage RWA infestations the same way they did before resistant varieties became available.

LCS MINT HARD RED WINTER WHEAT -

LCS Mint is the newest HRW variety from Limagrain Cereal Seeds. Released in 2012, LCS Mint has shown a broad adaptation across the Central Plains. LCS Mint is a medium maturing variety with excellent tolerance to both low pH soils and drought conditions. The disease resistance package for LCS Mint is headlined by resistance to the 2012 race of Stripe Rust and resistance to Soilborne Mosaic Virus. LCS Mint is susceptible to leaf rust, and can lodge under irrigation. Seed of LCS Mint must be grown by licensed Limagrain Cereal Seeds distributors. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

OAKLEY CL HARD RED WINTER WHEAT

Oakley CL is a hard red winter wheat variety developed by Kansas State University. Oakley CL is a single-gene Clearfield wheat with resistance to wheat streak mosaic virus and stripe rust; moderate resistance to leaf rust; long coleoptile; and, medium to medium-late maturity. In general, Oakley CL is suitable for dryland production in western Kansas and eastern Colorado.

Grain production of Oakley CL may not be saved for replanting under any circumstances. Oakley CL is marketed by Kansas Wheat Alliance. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

PROWERS 99 HARD RED WINTER WHEAT -

Prowers 99 was released by Colorado State University in 1999. Prowers 99 is marketed by the Colorado Wheat Research Foundation. Prowers 99 is resistant to Russian Wheat Aphid biotype 1*. It is a tall, awned, white-chaffed cultivar very similar to Lamar. Prowers 99 is late maturing, has average straw strength, moderate resistance to leaf rust, stem rust, stripe rust and wheat streak mosaic virus. It has protein and test weight greater than Yuma and TAM 107. Milling and baking tests have shown Prowers 99 to be equal to the best quality wheats and far superior to TAM 107. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA. * Biotype 2 has largely replaced biotype 1. Wheat producers should manage RWA infestations the same way they did before resistant varieties became available.

SETTLER CL HARD RED WINTER WHEAT -

Settler CL is a hard red winter wheat developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS and co-released with South Dakota State University and the University of Wyoming. Settler CL was released primarily for its superior adaptation to rainfed wheat production systems in Nebraska, Colorado, South Dakota, and eastern Wyoming. Settler CL has a relatively long coleoptile for a semidwarf, medium plant height, and moderate resistance to stripe rust. End use quality is good. Settler CL is a wheat that may be used as a component of the BASF CLEARFIELD® Production System with Beyond™ herbicide for the selective control of jointed goatgrass, downy brome, and feral rye. The CLEARFIELD® wheat technologies are protected under U.S. Patent Law. **Grain production of Settler CL may not be saved for replanting under any circumstances.** Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SY MONUMENT HARD RED WINTER WHEAT

-
SY Monument is a hard red winter wheat bred and developed by Syngenta Seeds, Inc. SY Monument is the result of a cross made in 2003 by Syngenta Seeds, Inc. in Junction City, KS. SY Monument was selected for height, straw strength, yield, bread making quality and resistance to leaf and stripe rust. SY Monument is best adapted to the winter wheat growing areas of the High Plains. Syngenta Seeds, Inc. maintains seed stock and certified classes of Foundation, Registered and Certified. Certified seed will be available in the fall of 2015. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SY SUNRISE HARD RED WINTER WHEAT -

SY Sunrise is a hard red winter wheat and is the result of a cross made in 2006 by Syngenta Seeds, Inc. from an AgriPro experimental, CDC Falcon, and a University of Nebraska experimental. SY Sunrise was selected for test weight, height, green leaf duration, quality, winter hardiness and yield. SY Sunrise is adapted throughout the winter wheat growing areas of the United States Central Plains based on tests conducted in Kansas, Colorado, Nebraska, Wyoming and South Dakota. Target market is irrigated and high management dryland. Syngenta Seeds, Inc. maintains seed stock and certified classes of Foundation, Registered and Certified. Certified seed will be available in the Fall of 2016. Certified Seed will be sold as "Certified Seed Only" and growers are required to sign a stewardship agreement. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SY WOLF HARD RED WINTER WHEAT -

SY Wolf was developed by Syngenta and released in 2011. It is an awned, white-chaffed, semi-dwarf hard red winter wheat variety. SY Wolf is medium-maturing with both good straw strength and test weight. With very good tolerance to stem rust, septoria and tan spot, it works well in heavy residue. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

TAM 114 HARD RED WINTER WHEAT -

TAM 114 is a hard red winter wheat variety developed by Texas A&M AgriLife Research. TAM 114 has excellent drought tolerance and top yield potential combined with a superior disease package. While developed for the high plains it's resistant to leaf rust, stripe rust, and stem rust has expanded the growing region off the high plains and in to central Texas. TAM 114 offers excellent baking and milling quality.

Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Variety Protection Applied For- 1994 PVPA.

WB-CEDAR HARD RED WINTER WHEAT -

WB-Cedar is a common hard red winter wheat released by WestBred (Monsanto). WB-Cedar exhibits very good winter hardiness, excellent straw strength, excellent top yields under favorable conditions, tolerance to acid soils and good shattering resistance. It shows tolerance to soil borne mosaic for east to west adaptation and has a good foliar disease package including stripe rust. Unauthorized Propagation Prohibited. U.S. Protected Variety- 1994 PVPA.

WB-GRAINFIELD HARD RED WINTER WHEAT -

WB-Grainfield is a WestBred (Monsanto) common hard red winter wheat that is medium-late maturity. Plant height is medium. WB-Grainfield is adapted to the southern Great Plains. It is resistant to current races of leaf rust and moderately resistant to stripe rust. WB-Grainfield is resistant to soil borne mosaic virus and spindle streak mosaic virus. It is moderately resistant to prevalent races of stem rust. It has intermediate resistance to tan spot and speckled leaf blotch. WB-Grainfield is susceptible to fusarium head scab and powdery mildew. It is moderately susceptible to wheat streak mosaic virus. Seed classes to be recognized include Foundation, Registered, and Certified. Unauthorized Propagation Prohibited. U.S. Protected Variety - 1994 PVPA.

WINTERHAWK HARD RED WINTER WHEAT -

Winterhawk is a hard red winter wheat variety developed by WestBred and licensed to AGSECO in 2007. Winterhawk is a high yielding variety with very good test weight. This variety has a medium length coleoptile, emerges well and covers the ground quickly in the fall. It has a high tillering capacity, along with very good drought tolerance. Winterhawk is resistant to stripe rust and moderately resistant to wheat streak mosaic virus, it is moderately susceptible to leaf rust. It has good straw strength, and very good milling and baking qualities. Unauthorized Propagation Prohibited - U.S. Protected Variety - 1994 PVPA.

HARD WHITE WINTER WHEAT

ANTERO HARD WHITE WINTER WHEAT -

Antero hard white wheat was released by Colorado State University (CSU) in 2012 and was named for one of Colorado's 14ers, Antero Peak. Antero is an awned, white-chaffed, medium maturing wheat with medium height, a medium length coleoptile, good straw strength, and excellent test weight. Antero is derived from the cross KS01HW152-1 (Trego/Betty sib)/TAM 111. Antero has shown high dryland and irrigated yields, good drought stress tolerance, and good milling and baking quality. Antero is resistant to prevalent races of stripe rust (including both 2010 and 2012 races), susceptible to leaf rust, moderately resistant to stem rust and wheat soilborne mosaic virus, and has good pre-harvest sprouting tolerance (similar to Snowmass and Hatcher, better than Thunder CL). Antero is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. For the 2016 crop, grain of Antero will not be contracted in the CWRF-ConAgra Ultragrain Premium Program in Colorado, though ConAgra will accept the grain. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA.

PLATTE HARD WHITE WINTER WHEAT -

Platte was developed by Syngenta and released in 1995. Platte is a high yielding, short semidwarf wheat with medium-late maturity and excellent straw strength. Platte provides moderate resistance to leaf rust and good resistance to soil-borne mosaic virus and spindle streak mosaic virus. However, Platte is susceptible to stripe rust. Milling and baking characteristics are good. Platte is well-adapted to a large portion of the hard winter wheat region. This includes eastern Kansas, southwestern Nebraska, eastern Colorado and the states of Texas and Oklahoma. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA

SUNSHINE HARD WHITE WINTER WHEAT-

Sunshine hard white wheat was released by Colorado State University (CSU) in 2014 and was named for one of Colorado's 14ers, Sunshine Peak. Sunshine is an awned, white-chaffed, medium-early maturing wheat with medium height, a medium-long coleoptile, good straw strength, and good test weight. Sunshine is derived from the cross KS01HW152-6/HV9W02-267W. Sunshine has shown good dryland and irrigated yields and good milling and baking quality. Sunshine shows an intermediate reaction to prevalent races of stripe rust (2010 and 2012 races), susceptibility to leaf rust, resistance to stem rust, moderate susceptibility to wheat soilborne mosaic virus, and good pre-harvest sprouting tolerance (similar to Hatcher, slightly better than both Snowmass and Antero). Sunshine is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. For the 2016 crop, grain of Sunshine will be contracted in Colorado through the CWRP-Arden Mills Ultragrains Premium Program. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Variety Protection Applied For – 1994 PVPA.

THUNDER CL HARD WHITE WINTER WHEAT- Thunder CL was released by Colorado State University in 2008, and is marketed by the Colorado Wheat Research Foundation. Thunder CL is tolerant to the herbicide Beyond™ which has shown excellent selective control of jointed goatgrass, cheatgrass and downy brome with fall or spring application, and suppression to control of feral rye. Thunder CL is an awned, white-chaffed, medium-early maturing, medium-short semidwarf. It also has high irrigated yields, excellent test weight, and good straw strength. Thunder CL has moderate resistance to stripe rust, stem rust, leaf rust, and wheat streak mosaic virus. Thunder CL has excellent milling and baking quality, such that it has been entered into the CWRP/ConAgra Ultragrain Premium Program which pays growers a premium to grow the variety. Participants in the program will need to sign a Grain Pricing Schedule with ConAgra Grain Processing Company detailing the contract terms - and a Wheat Seed Agreement with CWRP that requires planting of certified seed and the delivery of all production to ConAgra. **Grain production of Thunder CL may not be saved for replanting under any circumstances.** Thunder CL is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA.

APPROVED CERTIFIED SEED CONDITIONERS

The Approved Conditioner Program in Colorado is designed to fill the need for efficient cleaning and distribution of Colorado Certified Seed. Approved seed conditioners are regular members of the Colorado Seed Growers Association and provide quality assurance for the seed producer and the seed customer. An approved conditioner is not only responsible for cleaning certified seed, but also serves as a connection between the seed producer and the seed trade. Approved conditioners include: 1) firms that are authorized to purchase field-approved seed and move it into their plants for conditioning, submit samples for laboratory analysis, order tags, labels or bulk sales certificates, and merchandise the finished product, and 2) firms that provide seed cleaning and handling services which prepare the certifiable seed to be marketed by its grower. According to CSGA standards, all certifiable hard red winter wheat must be cleaned by an approved conditioner that has secondary equipment capable of removing jointed goatgrass. Such conditioners are noted with *. The following list does not include seed producers approved to condition only their own seed.
