Foreword

The Colorado Seed Growers Association (CSGA) is a non-profit educational and service organization, authorized by Cooperative Extension of Colorado State University as the official seed certifying agency in Colorado. Growers listed in this directory are members of the CSGA, producing certified seed in accordance with the rules and regulations of the Association. CSGA is a member of the Association of Official Seed Certifying Agencies (AOSCA). AOSCA is an organization composed of agencies responsible for seed certification in the United States, Canada, Argentina, Australia, Chile, New Zealand, Panama and South Africa. The following listings include fields eligible for certification in 2017. Each seed producer is responsible for maintaining the integrity of the certifiable seed listed herein. Final certification and the right to represent the seed as certified is dependent upon the results of field inspection, proper seed conditioning and laboratory analysis.

Growers warrant that seed sold by them conforms to the standards of the CSGA and to applicable state and federal seed laws. Certified seed may be sold bagged or in bulk. Bagged seed must be packaged in new containers and have an official certified tag or label attached to each bag. Each sale of certified seed in bulk must be accompanied by a bulk sales certificate completed and signed by the producer.

Colorado Seed Law requires that each container be labeled as to its origin, the germination percentage and date tested, percent by weight pure seed, other crop seed, weed seed and inert matter. In addition, the label must contain a lot number or lot identification, along with the name and address of the person who labeled or sold the seed.

The CSGA assumes no financial responsibility for seed listed in this directory or for disagreements over sales which may arise from this list. However, any complaints or irregularities should be reported to the CSGA office.

Russian Wheat Aphid Resistant Wheats

Ankor, Bill Brown, Bond CL, Halt, Hatcher, Prairie Red, Prowers 99, Ripper, Thunder CL and Yumar are varieties released by Colorado State University that are resistant to the original Russian Wheat Aphid (RWA) Biotype RWA1. These varieties are all susceptible to Biotype RWA2 and other biotypes identified since 2003 because they carry one or more genes, that confer resistance only to Biotype RWA1. Biotype RWA2 was identified during the 2003 growing season, and several others have been identified since that time. Ongoing biotype surveys, initiated in in 2005, indicate that Biotype RWA2 has largely replaced the original. This means that RWA resistance currently is not an important criterion for Colorado wheat growers to use in selecting their wheat varieties. Because of the biotype situation, wheat producers will need to manage Russian Wheat Aphid infestations the same way they did before resistant varieties became available.

The new RWA strain should be treated with a registered insecticide if aphid counts exceed economically acceptable levels. See the following web sites for reviews of RWA control recommendations:

www.ext.colostate.edu/pubs/insect/05568.html
http://wiki.bugwood.org/HPIPM:Russian_Wheat_Aphid

Wheat germplasm with resistance to Biotype RWA2 already has been identified and is being transferred to adapted varieties.

Foundation Seed

Foundation seed of public varieties is produced by Agronomy Foundation Seed, Department of Soil and Crop Sciences, Colorado State University.

Foundation seed of the following varieties is available for planting in the Fall of 2017. Foundation Seed orders will be accepted until August 21, 2017, after which the seed will be allocated. Individual requests can be routed to the Colorado Seed Growers office at 970-491-6202 or Aaron Brown at 970-222-4335. You may also email Aaron at aaron.brown@colostate.edu.

All seed can be picked up at the Ag Research Development and Education Center (ARDEC) on the east frontage road along I-25 north of Fort Collins; shipping can be handled with prior arrangements. Any seed ordered but not paid for or picked up by September 18, 2017 will be released to other growers.

Foundation seed will be packaged in 2,000 lb totes except in cases of carryover seed - if available!

Seed Arbitration

The Colorado Seed Law passed in 1993 provides for the arbitration of disputes between seed buyer and seller. The law states that all seed sold shall be tagged with a notice of the required arbitration.

If the seed buyer believes that the seed did not perform as warranted, a claim may be filed with the Colorado Commissioner of Agriculture. The law provides for a board who will hear testimony, review evidence and decide the validity of the claim. Findings of the board are not binding but may be used as evidence in any civil suit.

Further information on arbitration or assistance in filing for arbitration should be directed to the Colorado Department of Agriculture at 303-869-9070.

NOTICE: Listings are based on acres applied for. Eligibility for certification will depend on satisfactory field and seed inspections.

Seed Classes

Seed certification relies on a generation sequence of seed increase from the original Breeder seed through two or three subsequent generations. The number of generations beyond Breeder seed is determined by the originator at the time a variety is formally released. These generations are often identified as classes, and each class is produced and handled to maintain genetic purity. The primary advantage is that seed sold to a farmer is never more than a limited number of multiplications from that produced under the breeder's control. The limited generation system, when coupled with strict production and seed standards, assures genetically pure high-quality seed.

Breeder - Breeder seed shall be that seed or vegetative propagating material directly controlled by the originating or sponsoring plant breeder, institution, or firm which provides the source for the initial and recurring increase of Foundation seed. (B)

Foundation - Foundation seed is produced from Breeder seed and maintained by state agricultural experiment stations or private companies. Foundation seed is the source of Registered and/or Certified seed. (F)

Registered - Registered seed is the progeny of Foundation seed. Registered seed, when a Registered class is designated, is the parent stock for the production of Certified seed. (R)

Certified - Certified seed is the progeny of Foundation or Registered seed. Certified seed is the planting stock recommended for commercial production. (C)

Plant Variety Protection Act and Federal Seed Law, Title V

The Plant Variety Protection ACT (PVPA) was signed into law on December 24, 1970. The PVPA's objective is to encourage the development of novel varieties of sexually-reproduced plants and make them available to the public, providing protection to those who breed, develop, or discover them, and thereby promoting agricultural progress in the public interest. The U.S. Dept. of Agriculture is responsible for administering the Act.

A Certificate of Protection is valid 20 years from date of issuance in most cases. The owner has the right to exclude others from selling, offering for sale, reproducing, importing, or exporting the variety during this time. The owner is responsible for enforcing these rights.

Two options for plant variety protection are available to the developer of the variety. The first option enables the developer to sell or authorize for sale either certified or uncertified seed of the variety. The second option is the "certification only" option which utilizes provisions of Title V of the Federal Seed Act. A variety protected in this manner may be sold by variety name only as a class of certified seed. Sale of non-certified seed by variety name is in violation of both the certificate owner's rights and federal and state seed laws. Seed may be called "Certified" only after meeting all requirements and standards of a member of the Association of Official Seed Certifying Agencies (AOSCA). Violators of Title V may be prosecuted by the federal or state government. Most newly released varieties are protected under the "certification only" option. Contact CSGA with questions regarding PVP status of varieties.

Utility Patents

Utility patents are another means of protection for developers of new plant varieties. The CLEARFIELD wheat technologies are protected under U.S. Patent law and can be used by farmers only if they sign a BASF CLEARFIELD Stewardship Agreement for the year in which they will grow CLEARFIELD wheat. The agreement requires that the farmer, among other things, use CLEARFIELD wheat solely for planting a single commercial crop.

Questions and Answers on Plant Variety Protection

Q: What are the benefits of PVP for farmers?

A: The Plant Variety Protection Act was designed to promote the development of new plant varieties. It allows the breeder to recoup some of the development costs, often through royalties, to reinvest in future variety development programs.

Q: What does PVPA Title V protection mean?

A: The variety can only be SOLD as a class of certified seed. Sales of non-certified seed of these varieties is illegal.

Q: Can a farmer save seed of a protected variety?

A: For varieties protected under 1994 PVPA, yes. A farmer can save seed to plant on his own holdings (land owned, leased, or rented). For varieties protected by CLEARFIELD Utility Patent, no. New certified seed must be purchased each year.

Q: Can a farmer sell seed of a protected variety?

A: For varieties protected under 1994 PVPA or Utility Patent, no, unless permission is given by the variety owner. Contact CSGA if you do not know what protection a variety is covered by.

Q: In an effort to get around the law, can a farmer advertise farmer-saved seed of a protected variety as “Variety Not Stated” (VNS)?

A: No, selling a protected variety as VNS is a violation of the law.

Q: Can I condition/clean seed for a farmer?

A: Yes, but any actions taken as a step in marketing farmer-saved seed infringe upon the rights of the variety owner. Under the 1994 PVPA, cleaning or storing farmer-saved seed for sale are infringements. Anyone who cleans or conditions farmer-saved seed should keep written documentation from the farmer stating that the seed being cleaned is not in violation of PVP laws or patents.

HARD RED WINTER WHEAT

AP503 CL2 HARD RED WINTER WHEAT -

AP503 CL2 is a hard red winter wheat developed by Syngenta and released in 2008. This variety has two genes for tolerance to the Beyond® family of herbicides, which will allow for the addition of adjuvants to enhance weed control of tough grasses such as feral rye using the CLEARFIELD® system. AP503 CL2 is most similar to Jagalene, which is one of the parents in the cross. It has medium maturity, very good test weight, and good straw strength. AP503 CL2 has intermediate resistance to stripe rust, and is susceptible to leaf rust. **Grain production of AP503 CL2 may not be saved for replanting under any circumstances.** Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

EVERY HARD RED WINTER WHEAT -

Avery hard red winter wheat was released by Colorado State University (CSU) in 2015. Avery was named for Franklin C. Avery who was an early 20th century agricultural and banking pioneer in northern Colorado. Avery is an awned, white-chaffed, medium maturing wheat with medium height, a medium-long coleoptile, fair straw strength, and average test weight. Avery is derived from the cross TAM 112/Byrd. Avery is very similar to Byrd in having good winterhardiness, excellent drought stress tolerance, and very high yield potential. Avery differs from Byrd in having slightly larger kernels, two days later heading date, and slightly improved baking quality characteristics. Avery is moderately susceptible to susceptible to prevalent races of stripe rust (2012 races), susceptible to leaf rust and stem rust, moderately susceptible to wheat streak mosaic virus, susceptible to all biotypes of the Russian wheat aphid, and resistant to Greenbug biotype E, the wheat curl mite, and wheat soil borne mosaic virus. Avery is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Variety Protection Applied For – 1994 PVPA.

BILL BROWN HARD RED WINTER WHEAT -

Bill Brown was released by Colorado State University in 2007, and was named in honor of the late CSU Extension Plant Pathologist who devoted his career to management of diseases of wheat and other grain crops. Bill Brown is marketed by the Colorado Wheat Research Foundation. It is an awned, white-chaffed, medium maturing wheat, similar in maturity to Hatcher. Bill Brown was released based on its superior adaptation under non-irrigated production in eastern Colorado, high test weight, and resistance to prevalent races of leaf rust. It is moderately susceptible to stripe rust and is susceptible to stem rust. Plant height is medium short and coleoptile length is short. Standability under irrigated conditions is good. Bill Brown is resistant to Russian Wheat Aphid biotype 1*. It has good milling and baking properties and average grain protein content. Bill Brown is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA. *Biotype 2 has largely replaced biotype 1. Wheat producers should manage RWA infestations the same way they did before resistant varieties became available.

BRAWL CL PLUS HARD RED WINTER WHEAT -

Brawl CL Plus was released by Colorado State University in 2011. It is an awned, white-chaffed, medium height and early maturing wheat with both excellent straw strength and test weight. Brawl CL Plus is moderately resistant to leaf rust and moderately susceptible to stripe rust. Brawl CL Plus is a two-gene Clearfield wheat and is tolerant to the herbicide Beyond™ which has shown excellent selective control of jointed goatgrass, cheatgrass, downy brome, and feral rye with fall or spring herbicide application. The pedigree of Brawl CL Plus is Teal 11A/Above/CO99314 (CO99314 = TX91V4931/Halt). Brawl CL Plus has shown yields similar to Above and Bond CL (other Clearfield wheat varieties), with excellent test weight and milling and baking quality. **Grain production of Brawl CL Plus may not be saved for replanting under any circumstances.** Brawl CL Plus is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

BYRD HARD RED WINTER WHEAT -

Byrd was released by Colorado State University (CSU) in 2011 and was named for CSU's first wheat breeder, Byrd Curtis. It is an awned, white-chaffed, medium-maturing wheat that is medium in height and has excellent test weight and fair straw strength. Byrd is moderately resistant to stripe rust and moderately susceptible to leaf rust. Byrd is resistant to prevailing biotypes of the wheat curl mite, the vector of wheat streak mosaic and other viruses. The pedigree of Byrd is TAM 112/CO970547-7 (CO970547-7 = Ike/Halt). Byrd shows high dryland and irrigated yields, excellent drought stress tolerance, and exceptional milling and baking quality. Byrd is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA.

DENALI HARD RED WINTER WHEAT -

Denali was released to seed producers cooperatively by Colorado State University and Kansas State University in August 2011. It is awned, white-chaffed with medium-tall height and medium-late maturity. Denali was released based on its superior grain yield under non-irrigated and irrigated production conditions across the High Plains region, its excellent test weight, and its resistance to stripe rust. Reaction of Denali to new stripe rust races appearing in 2012 is moderately susceptible. Denali possesses good straw strength; milling quality is good and baking quality is average. Denali was selected from the cross CO980829/TAM 111. Denali is marketed by the Colorado Wheat Research Foundation under the PlainsGold Brand™ and the Kansas Wheat Alliance (KWA). Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety- 1994 PVPA.

HATCHER HARD RED WINTER WHEAT - Hatcher was released by Colorado State University in 2004. Hatcher is marketed by the Colorado Wheat Research Foundation. Hatcher has established a very stable, high-yielding record in Colorado. Hatcher was developed via a three-way cross with Yumar (50% parentage), Vista (25% parentage), and an experimental hard white winter wheat from Kansas State University (25% parentage). Hatcher is an awned, white-chaffed, medium maturing, semidwarf. Hatcher has intermediate coleoptile length, good shattering tolerance, average straw strength and excellent test weight. Hatcher is moderately susceptible to leaf rust and moderately resistant to stripe rust. Milling characteristics of Hatcher are excellent while its baking characteristics are good. Hatcher is resistant to Russian Wheat Aphid biotype 1*. Hatcher is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety. - 1994 PVPA. * Biotype 2 has largely replaced biotype 1. Wheat producers should manage RWA infestations the same way they did before resistant varieties became available.

JAGGER HARD RED WINTER WHEAT -

Jagger was developed by Kansas State University and the USDA-ARS, and released in 1994. Jagger is a very early maturing, moderately short variety with average straw strength. It has fair winter hardiness similar to Hawk and Newton. Jagger is susceptible to leaf and stripe rust and moderately resistant to wheat streak mosaic virus. It is susceptible to Hessian fly and powdery mildew. Jagger has average test weight patterns with good milling and baking qualities. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

LANGIN HARD RED WINTER WHEAT -

Langin hard red winter wheat was released by Colorado State University (CSU) in 2016. Langin was named for Edward J. Langin (1924-2006), former CSU Extension and AES agronomist based at the Plainsman Research Center in Walsh. Langin is an awned, white-chaffed, early maturing wheat with medium-short height, a medium length coleoptile, fair straw strength, and good test weight. Langin is derived from the cross CO050270/Byrd (CO050270 = Hatcher/NW97S295 pedigree). Langin is similar to Byrd and Avery in having good winterhardiness, excellent drought stress tolerance, and very high yield potential. Langin differs from Byrd in having improved stripe rust resistance and slightly improved baking quality characteristics. Langin is moderately resistant to prevalent races of stripe rust, susceptible to leaf rust and stem rust, moderately susceptible to wheat streak mosaic virus, susceptible to all biotypes of the Russian wheat aphid, and resistant to the wheat curl mite and wheat soil borne mosaic virus. Langin is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Variety Protection Applied For – 1994 PVPA.

**LCS CHROME HARD RED WINTER
WHEAT -**

LCS Chrome is a hard red winter wheat that was released by Limagrain Cereal Seeds in 2016. LCS Chrome has very good resistance to stripe and leaf rust and has shown to have a large area of adaptation from Central Oklahoma, through Kansas and Colorado and into Nebraska. LCS Chrome is a medium-late maturing product with good test weight, is high tillering and has excellent straw strength that is adapted to both dryland and irrigated production. LCS Chrome is hessian fly resistant and MS to wheat streak mosaic and works well in low pH soils . This product has very acceptable milling and baking qualities, and desirable flour protein. LCS Chrome is marketed by Limagrain Cereal Seeds and sold by our licensed dealer network. Unauthorized Propagation Prohibited - To Be Sold by Variety Name Only as A Class of Certified Seed - U.S. Protected Variety - 1994 PVPA.

LCS MINT HARD RED WINTER WHEAT -

LCS Mint is a hard red winter wheat that was released by Limagrain Cereal Seeds in 2012. LCS Mint has shown a broad adaptation across the Central Plains. LCS Mint is a medium maturing variety with excellent tolerance to both low pH soils and drought conditions. The disease resistance package for LCS Mint is headlined by resistance to the 2012 race of Stripe Rust and resistance to Soilborne Mosaic Virus. LCS Mint is susceptible to leaf rust, and can lodge under irrigation. Seed of LCS Mint must be grown by licensed Limagrain Cereal Seeds distributors. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

OAKLEY CL HARD RED WINTER WHEAT

Oakley CL is a hard red winter wheat variety developed by Kansas State University. Oakley CL is a single-gene Clearfield wheat with resistance to wheat streak mosaic virus and stripe rust; moderate resistance to leaf rust; long coleoptile; and, medium to medium-late maturity. In general, Oakley CL is suitable for dryland production in western Kansas and eastern Colorado.

Grain production of Oakley CL may not be saved for replanting under any circumstances. Oakley CL is marketed by Kansas Wheat Alliance. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SETTLER CL HARD RED WINTER WHEAT -

Settler CL is a hard red winter wheat developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS and co-released with South Dakota State University and the University of Wyoming. Settler CL was released primarily for its superior adaptation to rainfed wheat production systems in Nebraska, Colorado, South Dakota, and eastern Wyoming. Settler CL has a relatively long coleoptile for a semidwarf, medium plant height, and moderate resistance to stripe rust. End use quality is good. Settler CL is a wheat that may be used as a component of the BASF CLEARFIELD® Production System with Beyond™ herbicide for the selective control of jointed goatgrass, downy brome, and feral rye. The CLEARFIELD® wheat technologies are protected under U.S. Patent Law. **Grain production of Settler CL may not be saved for replanting under any circumstances.** Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SY GRIT HARD RED WINTER WHEAT -

SY Grit: This new release from AgriPro-Syngenta is a white chaff, medium height variety with medium-early maturity, best suited to Kansas, most of Oklahoma and the Western High Plains. It should do well under irrigation or dryland conditions. It has done well in various environments and has good stripe rust resistance. It has excellent straw strength in cases for pushing yields. Certified seed will be available in the fall of 2017. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

SY SUNRISE HARD RED WINTER WHEAT -

SY Sunrise is a hard red winter wheat and is the result of a cross made in 2006 by Syngenta Seeds, Inc. from an AgriPro experimental, CDC Falcon, and a University of Nebraska experimental. SY Sunrise was selected for test weight, height, green leaf duration, quality, winter hardiness and yield. SY Sunrise is adapted throughout the winter wheat growing areas of the United States Central Plains based on tests conducted in Kansas, Colorado, Nebraska, Wyoming and South Dakota. Target market is irrigated and high management dryland. Syngenta Seeds, Inc. maintains seed stock and certified classes of Foundation, Registered and Certified. Certified seed will be available in the Fall of 2016. Certified Seed will be sold as “Certified Seed Only” and growers are required to sign a stewardship agreement. Unauthorized Propagation Prohibited - To Be Sold By Variety Name Only As A Class Of Certified Seed - U.S. Protected Variety - 1994 PVPA.

WINTERHAWK HARD RED WINTER WHEAT -

Winterhawk is a hard red winter wheat variety developed by WestBred and licensed to AGSECO in 2007. Winterhawk is a high yielding variety with very good test weight. This variety has a medium length coleoptile, emerges well and covers the ground quickly in the fall. It has a high tillering capacity, along with very good drought tolerance. Winterhawk is resistant to stripe rust and moderately resistant to wheat streak mosaic virus, it is moderately susceptible to leaf rust. It has good straw strength, and very good milling and baking qualities. Unauthorized Propagation Prohibited - U.S. Protected Variety - 1994 PVPA.

HARD WHITE WINTER WHEAT

ANTERO HARD WHITE WINTER WHEAT -

Antero hard white wheat was released by Colorado State University (CSU) in 2012 and was named for one of Colorado's 14ers, Antero Peak. Antero is an awned, white-chaffed, medium maturing wheat with medium height, a medium length coleoptile, fair straw strength, and excellent test weight. Antero is derived from the cross KS01HW152-1 (Trego/Betty sib)/TAM 111. Antero has shown high dryland and irrigated yields, good drought stress tolerance, and good milling and baking quality. Antero is resistant to prevalent races of stripe rust (including both 2010 and 2012 races), susceptible to leaf rust, moderately resistant to stem rust and wheat soilborne mosaic virus, and has good pre-harvest sprouting tolerance (similar to Snowmass and Hatcher, better than Thunder CL). Antero is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. For the 2017 crop, grain of Antero will not be contracted in the CWRP-Ardent Mills Ultragrains Premium Program in Colorado, though Ardent Mills may accept the grain. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA.

SNOWMASS HARD WHITE WINTER WHEAT -

Snowmass was released by Colorado State University in 2009, and is marketed by the Colorado Wheat Research Foundation. Snowmass was released based on its resistance to stripe rust and wheat streak mosaic virus, superior milling and bread baking quality characteristics, and adaptation for dryland production in eastern Colorado and the west-central Great Plains. Snowmass is an awned, white-glumed, hard white winter wheat. Snowmass has medium maturity and medium tall height. Coleoptile length is similar to Hatcher. Straw strength is less than average, adequate for limited irrigation or dryland production. Snowmass has adequate winterhardiness for successful production in the central Great Plains region. Snowmass is moderately resistant to leaf rust and stem rust. Reaction of Snowmass to new stripe rust races appearing in 2012 is moderately susceptible. Snowmass has moderate resistance to pre-harvest sprouting, similar to Hatcher, Trego and Avalanche. Snowmass has excellent test weight. Snowmass has excellent milling and baking quality, such that it has been entered into the CWRF - Ardent Mills Ultragrain Premium Program which pays growers a premium to grow the variety. Participants in the program will need to sign a Grain Pricing Schedule with Ardent Mills Grain Processing Company detailing the contract terms - and a Wheat Seed Agreement with CWRF that requires planting of certified seed and the delivery of all production to Ardent Mills. Snowmass is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. Unauthorized Propagation Prohibited – To Be Sold By Variety Name Only As A Class Of Certified Seed – U.S. Protected Variety – 1994 PVPA.

APPROVED CERTIFIED SEED CONDITIONERS

The Approved Conditioner Program in Colorado is designed to fill the need for efficient cleaning and distribution of Colorado Certified Seed. Approved seed conditioners are regular members of the Colorado Seed Growers Association and provide quality assurance for the seed producer and the seed customer. An approved conditioner is not only responsible for cleaning certified seed, but also serves as a connection between the seed producer and the seed trade. Approved conditioners include: 1) firms that are authorized to purchase field-approved seed and move it into their plants for conditioning, submit samples for laboratory analysis, order tags, labels or bulk sales certificates, and merchandise the finished product, and 2) firms that provide seed cleaning and handling services which prepare the certifiable seed to be marketed by its grower. According to CSGA standards, all certifiable hard red winter wheat must be cleaned by an approved conditioner that has secondary equipment capable of removing jointed goatgrass. Such conditioners are noted with *. The following list does not include seed producers approved to condition only their own seed.
